4. Research experience:

AN ASCENDING AORTIC HAEMODYNAMIC study was done between 2002 to 2005. The objectives of the study were to;

1. Compare the ascending aortic haemodynamics between age matched normotensive and hypertensives
2. Study the effect of hypertension on the ascending aortic diameter
3. Study the effect of ascending aortic diameter influence on the left ventricular function in hypertensives.
4. Study the effect of ascending aortic diameter on the ascending aortic haemodynamics

Scope of the work:

PURPOSE: This study done on a larger population can help to develop a clinical hemodynamic monitoring tool in treatment of hypertension & also in various hypertensions induced hemodynamic disorders which may help in reducing the morbidity associated with hypertension.

BUT THIS NEEDS AN EXTENSIVE WORK OF

1. Assessing normal haemodynamic parametrs in ascending aorta & descending aorta
2. Establish relation, between changes seen in aorta and peripheral vessels.
3. Develop a normative data of normal haemodynamic parametrs.

D) List of PUBLICATIONS:

Teaching Philosophy:

I believe that each student is a unique individual who needs a secure, caring, and stimulating atmosphere in which to grow and mature emotionally, intellectually, physically, and socially. It is my desire as a clinical educator to help students meet their fullest potential. I believe that in establishing such an environment, (1) the teacher acting as a guide, (2) allowing the student's natural curiosity to direct his/her learning, and (3) promoting respect for all things and all people.

Above all the ultimate principle of me is to make them fall in love with their academics.

When the teacher's role is to guide, acting as the primary source of information to the students but at the same time bring the desire to discover for themselves and practice skills in authentic situations, by allowing adequate time and space to use materials that reinforce the lesson being studied for individual discovery and construction of knowledge to occur.

Equally important to self-discovery is having the opportunity to study things that are meaningful and relevant to one's life and interests. Developing a curriculum around student interests fosters intrinsic motivation and stimulates the passion to learn. One way to take learning in a direction relevant to student interest is to invite student dialogue about the lessons and units of study. Given the opportunity for input, students generate ideas and set goals that make for much richer activities than I could have created or imagined myself. When students have ownership in the curriculum, they are motivated to work hard and master the skills necessary to reach their goals.

For me, teaching provides an opportunity for continual learning and growth. One of my hopes as an educator is to instill a love of learning in my students, as I share my own passion for learning with them. I am such a person and will always strive to be the best educator that I can be.

My objectives of physiology teaching are

1. clinical based
2. concept based teaching

I believe I have fairly done well in serving my objectives and meeting the student's needs.

I evaluate my objectives using

1. MCQ exam
2. Oral question sessions
3. Case presentation by students with physiology concept application

E) ADMINISTRATIVE EXPERIENCE

I had actively involved in all medical council of India work required in setting up of Sree Gokulam medical college at Trivandrum, Kerala India for more than two years
